

Firmware/Hardware compatibility

ATTENTION!: the latest firmware for this product can be different according to the hardware on board. The hardware version of the product can be checked on the unit label next to the serial number as reported in the picture below.

Prolights will provide to download from the website only the **latest firmware version compatible with each hardware revision**.

It's possible to check the compatibility between hardware and firmware in **HW Compatibility**.

	REVISION	RELEASE DATE	FIRMWARE CHANGELOG	HW COMPATIBILITY
	3.0	30/10/2021	New functions: <ul style="list-style-type: none">Added "8Pix Direct" DMX chart into Film category	5.1 5.0 4.0 3.0 2.0
	1.6	28/09/2021	New functions: <ul style="list-style-type: none">Added Dimmer End selector, possibility to have Snap or Fade at dimmer ends	1.0

Example of firmware changelog for EclPanelTWC

ATTENTION!: some old product may have hardware revision but **not have** an hardware revision label on the unit or in the changelog. In this case the firmware update can be done considering the starting number of the firware release.

e.g.1 unit with firmware version 1.1 can be updated only with 1.x version and not with 2.x

e.g.2 unit with firmware version 1.1.01 can be updated only with 1.x.xx version and not with 2.x.xx

Products with different hardware can have different features. Please check on the customer care page the hardware changelog of the product.

Check with support@prolights.it if it's possible to update the product's hardware.
